EDUCATION

Ajou University, Suwon, Korea, Republic of *Mar. 2009 – Feb. 2016*

- B.S., Major: Information and Computer Engineering, Minor: E-business
- GPA: 3.53 / 4.5

WORK EXPERIENCE

LemonCloud, Seoul, Korea, Republic of *Apr. 2018 – Present*

Software Engineer / Frontend Team

- Leading a frontend team of about five across web, React Native and Electron apps for client services and in-house products
- Led the team's stack migration from Angular to React and from lerna to Nx
- Built shared auth and API libraries, an in-house app template, and team code standards with shared lint and CI gates and rules for AI coding tools (AGENTS.md)
- Built and published to npm hybrid-shell, a mobile shell for developing and testing webview apps in the browser

GE Healthcare, Seongnam, Korea, Republic of *Feb. 2016 – Oct. 2017*

Software Engineer / Software Team

- Developed ultrasound medical device software in C++ and Qt
- Built an online report feature in collaboration with a global cloud DICOM vendor
- Developed ultrasound scan image manipulation features

GE Healthcare, Seongnam, Korea, Republic of *Jul. 2015 – Dec. 2015*

URP Intern / Software Team

- Built an automated device test tool with a Raspberry Pi web server, a Qt Android app and Arduino HID firmware

SKILLS

Languages / Frameworks:	TypeScript, React, React Native, Electron, Angular, Ionic, Node.js, Tailwind, Swift, C++, Qt
State / Data:	TanStack Query, Zustand
Build / Deploy:	Nx, Vite, GitHub Actions, AWS
Quality / Monitoring:	Playwright, Vitest, Firebase Crashlytics and Analytics
Payments:	App Store and Google Play in-app purchases, PG and VAN integration
Written and Spoken Language:	Korean (native), English (professional reading and writing)

KEY PROJECTS

SLP – Residential and Office Community Platform *May 2019 – Present*

- Frontend lead from the 2.0 rebuild across the resident app and web, operations admin and payment kiosk
- Built a structure that opens new sites with no frontend development or deployment, supporting growth from 7 to 60+ sites
- Rebuilt the app with React Native and Nx so one repo builds an app per site, including SLP Office
- Built an Electron unattended payment kiosk with NICE Payments VAN card payments and remote auto-update

DoU – Multi-platform Messenger *Dec. 2025 – Present*

- Owned desktop (Electron) and web, and recorded architecture decisions as ADRs
- Split chat storage, sync, sockets and auth into a shared engine so each platform keeps only its UI
- Designed the Electron shell to load the deployed web app remotely, shipping web changes without redeploying the shell
- Runs as the company messenger in place of Slack

EPYT – Personal Color and K-Beauty App *Apr. 2026 – Present*

- Rebuilt a webview app with no revenue as a React Native hybrid app, shipped it on iOS and Android, and unified web and app in an Nx monorepo
- Revenue from the first month after the July 2026 relaunch, 6K+ installs, peak 30-day active users of about 4K
- Built face-shape analysis, the main paid feature, which uses MediaPipe to check the face and frontal pose on-device before requesting AI analysis
- Implemented in-app purchases including consumables, subscriptions and restore

Eureka Codes – Cloud DevOps Platform *Dec. 2023 – Nov. 2025*

- Rebuilt the Angular frontend with React, Vite and Nx and organized shared libraries by domain
- The product was selected for TIPS by Korea's Ministry of SMEs and Startups (Jan. 2024)

Flow – AI Workflow Builder *Jan. 2026 – Aug. 2026*

- Web frontend lead (React, Vite, Nx, TanStack Query, Zustand)
- Built an MCP server that lets AI assistants create and run Flows and published it to npm

SIDE PROJECTS

AICOMMIT2 *Jul. 2023 – Present*

- Open-source CLI that generates commit messages with multiple AI models
- 530+ GitHub stars, 50K+ npm downloads in the last 18 months

HWIP *Sep. 2026 – Present*

- Remote control app for coding agents, in development: iPhone, Apple Watch, Android and web apps, CLI and MCP server, AWS serverless backend, end-to-end encryption

PUTON *Sep. 2018 – Dec. 2018*

- Developed an EOS-based DApp for 'The 1st DApp Development Contest' on EOSYS
- Won 2nd place in the DApp contest

AUDIGA *Mar. 2017 – Dec. 2017*

- Built an audio tour guide iOS app in Swift and part of its AWS Lambda API server
- Selected for individual mentoring in batch 11 of 'Primer', the startup accelerator in Korea

SUJI *Dec. 2015 – Apr. 2016*

- Developed an open source Web & Mobile POS system for the 'Naver D2 Campus FEST 2015' contest and reached the finals

CERTIFICATES

Engineer Information Processing, Human Resources Development Service of Korea, 2014
Engineer Embedded, Human Resources Development Service of Korea, 2014
